

CASE MANAGEMENT

Case Management is a confidential service that can help you navigate the complicated world of health care. The program is available if you have an illness or injury that is difficult, long-term or costly.

Our Case Managers are specially trained registered nurses and licensed social workers. They will work closely with you, your family and your providers to help ensure that you get high quality, cost-effective care. Your Case Manager will develop an appropriate plan of care for you, can answer your questions, and will help you understand your treatment and options for your care.

The benefits of Case Management include:

- Personal support for you and your family during a serious injury or illness.
- Education on your health care, home care needs, treatments, lifestyle changes, etc.
- A Case Manager to facilitate communication between you and your doctor and hospital.
- Possible savings for you and your benefit plan as a result of discounts on physician and hospital services.
